NSE vs BSE: The Infrastructure

The National Stock Exchange (NSE) dominates derivatives and high-volume equity. The Bombay Stock Exchange (BSE) is the historical anchor with more listed entities. Aegis Quantum prioritizes NSE liquidity pools for terminal execution.

F&O Basics: Tactical Entry

Futures and Options (F&O) allow for leveraged directional bets and hedging. In the Indian market, Thursday Expiries (Weekly/Monthly) create maximum volatility spikes.

🔒 SECURITY MODULE: BEGINNER MODE ACTIVE

RISK GUARDIAN TERMINAL

Welcome to the Aegis Risk Interface. We have simplified complex financial data into plain-English controls to ensure your sovereign capital remains protected while you learn the ropes.

CURRENT SAFETY SCORE

STATUS: NOMINAL

84 / 100

"Your portfolio is well-balanced. No immediate threats detected in current market volatility."

📉 WHAT IS DRAWDOWN?

Think of this as your "maximum temporary loss." It measures how far your account value has dropped from its highest point. **Currently: 2.4%**

🏠 WHAT IS MARGIN?

Think of this as "collateral." It's the minimum cash you must keep in your vault to keep your trades open. **Utilization: 12%**

📈 LEVERAGE LIMIT

This is your "speed limit." Higher leverage means faster growth but higher risk of a crash. **Active: 3.0x**

⚠️ LIQUIDATION

The "Emergency Stop." If your losses exceed your margin, the system automatically exits trades to prevent a total loss.

RISK SETUP WIZARD

01 STEP ONE
Defensive Strategy

02 STEP TWO
Exposure Limits

03 STEP THREE
Auto-Shedding

OPERATOR TIP

"As a beginner, we recommend setting your Drawdown Limit to no more than 5%. This ensures a single bad day won't wipe out weeks of progress."

CONFIGURATION SHELL V1.0

How much are you comfortable losing on a single trade?

ULTRA SAFE

1% max risk per trade.
Lowest volatility,
highest capital
protection.

BALANCED

2.5% max risk per trade.
Standard operational
balance.

AGGRESSIVE

5% max risk per trade.
Faster growth with
significant swings.

EMERGENCY STOP-LOSS TRIGGER (%)

10.0%

VERY TIGHT (1%)

LOOSE (25%)

SKIP SETUP

CONFIRM & CONTINUE

CORE ENGINE

System utilizing quantum-resistant encryption (QRE-B) for all risk parameters.

UPDATE FREQUENCY

Real-time telemetry from 4 major liquidity providers. Latency: 4ms.

SAFETY LOCK

Hardware keys enabled. All risk changes require biometric authentication.

TERMINAL STATUS

Operational. All redundant systems online. No breaches detected.
